Gainesville's *ultimate sports complex*

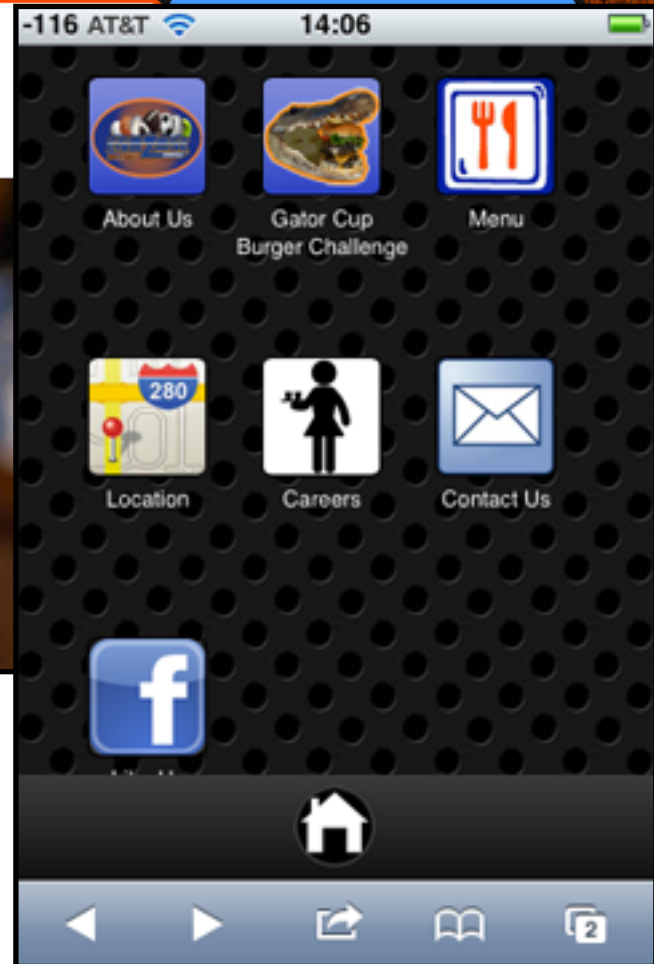

EndZone of Gainesville

A local restaurant needed a new website to replace their antiquated web 1.0 site.

They were concerned of the process required to put new information on their site. With their needs in mind I customized a WordPress theme to meet their needs.

They also envisioned the mobile counterpart of their site to be akin to that of an app their clientele would find on their smartphones.

Features:

- custom WordPress theme
- customized CSS and plugins
- social media integration
- Fully functional HTML5 web app
 - native app-like functionality
- PhoneGap created native apps for android and iPhone
