MAIDAPP (MaidSuite)

MaidSuite is a fully featured web app that was conceptualized by Kristen Hadeed (owner of Student Maid in Gainesville). I am part of a three person team working on the development of this app.

Originally based on Django, now PHP, I have worked on all facets of the app. Front end and backend development. Specifically I developed the fully HTML5 mobile application pictured above on right.

Features:

- Twitter Bootstrap Framework
- custom jQuery effects
- jQuery mobile elements
- Fully functional HTML5 web app
  - use of emerging geolocation tags
- Python(Django) back-end development
